

## ELLGARD® DLK35 Heat Resistant Gloves

The ELLGARD® DLK35 is a heavy duty double layers knitted heat resistant glove. The knitted aramid/cotton blend providing flexible and comfortable high heat protection with specialised silicone strip coating providing excellent grip.

### Features

- Contact temperature level 4 (500°C) requires 15 seconds while ELLGARD DLK achieved 21 seconds; convective heat level 4 requires 18 seconds while the DLK achieved 37 seconds.
- Exclusive technology of double layer liner offering the best protection against high temperature.
- Both sides silicone coated providing excellent grip, extra heat resistance and durability.
- 360° breathability to keep your hands cool while wearing.
- Multiple launderings while both heat and cut resistant level remain the same.
- Length: 350mm

*\*Please note, that due to the high heat protective requirements of this glove, the inner liner is not connected to the outer glove at the fingertips (only at the cuff). In the event that the inner liner comes out of the glove, simply fold it back in.*
